

TASK 3: DATA VISUALIZATION

1. Introduction

The objective of this task is to transform raw sales data into meaningful visual representations. Data visualization helps identify trends, compare product performance, and support decision-making through graphical analysis.

2. Dataset

The dataset contains sales information for three products (Laptop, Mobile, and Tablet) from January to June.

	A	B	C
1	Month	Product	Sales
2	Jan	Laptop	50000
3	Jan	Mobile	30000
4	Jan	Tablet	20000
5	Feb	Laptop	55000
6	Feb	Mobile	35000
7	Feb	Tablet	22000
8	Mar	Laptop	60000
9	Mar	Mobile	40000
10	Mar	Tablet	25000
11	Apr	Laptop	65000
12	Apr	Mobile	42000
13	Apr	Tablet	27000
14	May	Laptop	70000
15	May	Mobile	45000
16	May	Tablet	30000
17	Jun	Laptop	75000
18	Jun	Mobile	50000
19	Jun	Tablet	32000
20			

3. Bar Chart: Monthly Product Sales Analysis

Observation:

- Laptop sales are higher than Mobile and Tablet sales.
- Tablet sales are the lowest among all products.
- Sales increase gradually over the months.

4. Line Chart: Monthly Sales Trend

Observation:

- The sales trend shows continuous growth from January to June.

- The highest sales were recorded in June.
- Overall business performance improved over time.

5. Pie Chart: Product Sales Distribution

Observation:

- Laptop contributes 49% of total sales.
- Mobile contributes 31% of total sales.
- Tablet contributes 20% of total sales.

6. Insights

7. Laptop accounts for the largest share of total sales.
8. Mobile is the second-best performing product.

9. Tablet contributes the lowest sales percentage.

10. Monthly sales show a positive growth trend.

11. The company's revenue is primarily driven by Laptop sales.

12. Conclusion

The sales dataset was visualized using bar, line, and pie charts. The analysis revealed that Laptop products generated the highest sales, contributing 49% of total revenue. Mobile products accounted for 31%, while Tablets contributed 20%. The monthly sales trend showed consistent growth from January to June, indicating positive business performance. These visualizations helped identify product performance, sales trends, and business opportunities, supporting data-driven decision-making.
